Education

University of Edinburgh – MSc in Computer Science	Aug 2023
University of Edinburgh – BSc in Computer Science	June 2022
Sunway College – Cambridge International A-Level	June 2018

Experience

Machine Learning Platform Engineer, Tencent – Kuala Lumpur, Malaysia May 2026 – Present

- **Embedding Cache System:** Architected a Redis-based embedding cache for the vectorization pipeline using async background tasks and batch connection optimization, reducing vector re-computation costs by [X].
- **Internal Wiki Ingestion:** Overhauled internal wiki ingestion by introducing a high-throughput Rust parser, fixing edge-case conversions, and implementing delta-sync change detection.
- **KM API Proxy:** Spearheaded the Knowledge Management API proxy layer for directory search, ACL-synced moves, and fast AI-content ingestion that bypasses cloud storage round-trips.

Software Engineer, InsiderSecurity – Kuala Lumpur, Malaysia May 2024 – April 2026

- **Core Risk Engine Optimization:** Led end-to-end performance overhaul (multiprocessing, code streamlining, cache redesign) achieving $\geq 140\%$ throughput improvement.
- **Cloud Integration:** Extended product from on-prem only to hybrid/cloud by integrating AWS and Azure data sources, enabling compliance (e.g., GCC requirements) and broadening deployment scenarios.
- **New Log Ingestion Pipeline:** Designed and implemented a cloud and syslog-based ingestion path eliminating the need for on-prem sensors, expanding addressable market and simplifying onboarding.
- **Legacy System Refactoring and ML Enhancements:** Modernized SQL anomaly detection and other legacy components with cleaner architecture, optimized queries, and MLbased improvements.
- **Automated Sensor Configuration:** Built Redis-backed automation to classify and tag sensors dynamically, removing manual configuration effort and reducing misconfiguration risk at scale.

Global Software Service Engineer, Huawei Technologies – Kuala Lumpur, Malaysia Dec 2023 – April 2024

- Gathered client requirements, verified data compatibility, and supported end-to-end data and system migration planning for major software upgrade projects.

Java Tutor and Marker, University of Edinburgh – Edinburgh, United Kingdom Jan 2023 – May 2023

- Hosted weekly tutorial sessions, guided students through Java course materials, evaluated courseworks and offered personalized feedback on tutorials and courseworks.

Projects

Algorithmic Trading System

- Built a **Python** algorithmic trading system with historical and real-time execution via the [MooMoo API](#).
- Leveraged **multithreading** in free-thread python 3.14 to implement and evaluate multiple alpha strategies.

Personal Portfolio Website

<https://minsuan96.github.io/portfolio/>

- Designed and developed a personal website using [Jekyll](#), [Vite](#) and [React](#) on [GitHub Pages](#), showcasing clean layout, responsive design, and maintainable content structure.

Languages and Skills

Programming Languages: Python, Ruby, C++ , C, JavaScript, Java, Kotlin, Haskell, Solidity, SQL

Techniques: Machine Learning, MongoDB, RabbitMQ, Redis, Git, Linux, Azure, AWS, Kubernetes

Natural Languages: English, Mandarin (Chinese), Malay
